

About Me

Detail-oriented and highly organized team player with a strong ability to manage multiple projects simultaneously with accuracy. As a third-year Computer Science student, I have gained extensive knowledge and practical experience in software development. I have successfully developed various console and web applications, including a weather API, a Chess Engine, an E-Grade Book for School Systems, and an E-Library project. My technical expertise includes C# with ASP.NET for the E-Library project and Java with Spring Boot for the other applications. I am meticulous, detail-oriented, and possess excellent communication skills, both technical and interpersonal.
